### Around the Farm

#### Onions.

As a money maker, one year with another, the onion is among the leading garden crops. A good supply should be grown in the farmer's garden for home use.

Onions require a rich soil not too sandy, as they must be able to reach constant moisture. Inasmuch as the young plants are very tender and require careful weeding, it is best to sow them on the soil free from weed seed, lumps and stalks of any kind. Sow early in rows fourteen inches apart, covering the seed with about an inch of fine soil pressed down with a garden rake. Do not allow a crust to form over the rows before the onions come up.

Sow it so as to avoid very much thinning of plants which is a tedious job. About twenty good seed per foot will give a thick enough stand. If vacancies occur from poor seed fill in later.

Land used for onions should be fall plowed. Or better than spring plowing, if not fall plowed, is to disc or harrow the land instead of plowing, plank down and sow the seed. Crop after crop can be raised on the same land if it has been kept rich with well-rotted manure, and no insect pest has infested the crop. Such land is usually free from weeds and is in a good state of tilth. That's the only reason for successive cropping. Cultivate frequently enough to keep the ground mellow and free from weeds. Hand weeding will be necessary.

To get early onions, sets may be used. Anything from the size of a bean to about three-quarters of an inch in diameter may be planted without danger of their going to seed. They form new bulbs in advance of those grown from seed.

Set three inches deep in fine, rich soil, about three inches apart in rows a foot or more apart. Put each bulb

about it. Give same care as crop from onion seed.

#### The Garden.

There is no place of ground that has to grow so large variety of crops as the garden. It is hard to find a small plot that will be ideal for all plants.

There are tropical plants like the tomato, melon, and bean that would do better on the south slope of a sandy soil. Then there are such as late cabbage parsnips, beets and other slow growing plants that would do better on a heavy soil with a north slope.

As a light soil is more apt to dry out in midsummer it is necessary to have water handy to turn on if necessary or give it constant cultivation to form a dust mulch in case the land is to be occupied in midsummer.

By planning to have the extra early truck on the sandy, south slope, it will be gone in time to put melons, early sweet corn and similar crops on the same ground.

The garden soil should be rich. Fine, well-rooted manure will give richness and humus. If the sand pit is handy, the farmer could haul a few loads when not busy and scatter that over a portion of the garden if it need warming up. By all means keep the soil in fine tilth, so wheel hoe will work easily. Poultry and sheep manure are very good for garden. Coarse manure, or weed stalks half plowed under are an abomination and cause much loss of time and crops.

#### Early Vegetables.

If growing for the market, the early vegetables always bring the best prices. In growing for the home supply, why not have them early as well as to wait until midsummer before getting a taste of the good things? The hot beds will help us out in this by weeks of time, as many things can be grown ready

the seed can be safely sown in open ground. Tomatoes, lettuce, early cabbage, peppers and egg plants ought all to be sown in the hot bed. Beets and onions can be forwarded several weeks if well started in the hot beds; as also cucumbers, musk and water-melons. Cut turnips in halves, scrape out the inside and fill the shells with rich soil, sow the seed in these, and when safe to go in the open ground plants out the entire mass. Cover them well and the shells will decay, furnishing, both plant food and moisture and the plants will go on growing without ever a check.

#### Big Profits in Trees.

Get right away from the idea that because trees do not grow and ripen as fast as other crops, forestry in the woodlot will benefit future generations only. Most forest trees will reach commercial size well within an ordinary lifetime, and many of them in a much shorter period.

Did it ever occur to you that this country offers today few investments which equal in safety and in net returns the thrifty-growing tree of a commercially valuable kind? Don't fall into the way of thinking that the only interest which a big tree yields is its annual growth. That in itself shows a fair return. But your trees are not only increasing in size; they are also increasing rapidly in value.

A few days' work in the woodlot each year will yield more money for the same effort than any other work on the farm. This is a strong statement, but the facts bear it out.

#### When the Cow is Choked.

Cows will often get choked with a small potato or other hard substance in food. To relieve them, take of fine cut chewing tobacco enough to make a ball the size of a hen's egg; dampen it with molasses so it adheres closely, lift up the tongue forward and crowd the ball as far down the throat as possible. In a short time it will cause sickness and vomiting and the obstruction will be thrown out.

For the best results fruit and other trees should be cultivated early and

summer, as that is the time when most growth is made. When the fruit is small there is plenty of sap for vigorous wood growth, but after the fruit approaches maturity the wood growth decreases.

If any top grafting has been done and the grafts have taken, all sprouts below the grafts should be rubbed off clean, allowing the full vigor to go into the graft.

Don't tie a cough or cold up in your system by taking a remedy that binds the bowels. Take Kennedy's Laxative Honey and Tar. It is better. It opens the bowels—expels all cold from the system, relieves coughs, colds, croup, whooping cough, etc. An ideal remedy for young and old. Children like it. Sold by Jno. N. Taylor.

A pound of phosphorus will head 1,000,000 matches.

are caused by indigestion. If you eat a little too much, or if you are subject to attacks of indigestion, you have no doubt had shortness of breath, rapid heart beats, heartburn or palpitation of the heart. Indigestion causes the stomach to expand—swell, and puff up against the heart. This crowds the heart and interferes with its action, and in the course of time the heart becomes diseased.

### Kodol Dyspepsia Cure

digests what you eat, takes the strain off of the heart, and contributes nourishment, strength and health to every organ of the body. Cures Indigestion, Dyspepsia, Sour Stomach, Inflammation of the mucous membranes lining the Stomach and Digestive Tract, Nervous Dyspepsia and Catarrh of the Stomach.

After eating, my food would distress me by making my heart palpitate and I would become very weak. Finally I got a bottle of Kodol and it gave me immediate relief. After using a few bottles I am cured. MRS. LORING NICHOLS, Fort Worth, Tex., N. Y.

I had stomach trouble and was in a bad state as I had heart trouble with it. I took Kodol Dyspepsia Cure for about four months and it cured me. T. KAUBLE, Nevada, O.
